

How to install Virtual Box Additions on Ubuntu

If you install ubuntu as a guest on virtual box, you need to do a couple of things to install the virtualbox additions:

1. Mount your ubuntu cd/iso from the virtualbox GUI.

2. Install GNU Compiler and header files (use the command `uname -r` and substitute it with `KERNELVERSION` in the command below)

```
sudo apt-get install build-essential linux-headers-KERNELVERSION
```

3. Now mount the VirtualBoxAdditions cd/iso from the virtualbox GUI.

4. Run the VirtuaBox installer:

```
sudo sh /media/cdrom/VBoxLinuxAdditions.run install
```

5. Restart the virtual machine and you are all done!
